PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 44 (Utah) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 44 (Utah) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, Norman Lawrence, Chief, Population Distribution Unit, and Charles P. Brinkman; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

Number of Inhabitants

The State.—The Territory of Utah was organized in 1850, at which time it comprised, in addition to the area of the present State, areas now constituting western Colorado, southwestern Wyoming, and the greater part of Nevada. The area of the Territory was reduced in 1861 by the organization of Nevada and Colorado Territories and by a transfer to Nebraska Territory. It was reduced again in 1864 and 1866 by the eastward extensions of the boundaries of the State of Nevada and in 1868 by the organization of Wyoming Territory. Utah was admitted to the Union in 1896 as the forty-fifth State with boundaries as at present. Its population on April 1, 1950, according to the Seventeenth Census, was 688,862. The State has a land area of 82,316 square miles. In 1950 there was an average of 8.4 inhabitants per square mile as compared with an average of 6.7 in 1940. Among the States and the District of Columbia, Utah ranked thirty-ninth in population and eleventh in land area.

In 1850, the first year in which it was included in a Federal census, the Territory of Utah had a population of 11,380 (table 1). In 1950, 100 years later, the population of the State was more than 60 times as large. The rate of population growth was rapid in the nineteenth century, and the 1900 population was more than 24 times as large as the population in 1850. In the twentieth century, the rate of growth has been more moderate. The numerical increase of 138,552 between 1940 and 1950, however, was the largest in the history of the State, whereas the rate of growth, 25.2 percent, was the largest experienced since the decade 1900 to 1910.

Usual place of residence.—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1950. In 1940 such persons were treated as part of the popula-

tion of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

Urban and rural population.—The 1950 urban population of Utah numbered 419,855 persons, or 65.3 percent of the population of the State (table 1). The urban population was living in the 33 urban places in the State and in other territory included in the urban fringe of Salt Lake City. More than one-fourth of the total population of the State was living in Salt Lake City (table 2).

The rural population of Utah comprised 239,007 persons, or 34.7 percent of the population of the State (table 1). Of the rural population, 69,682 persons, or 29.2 percent, were living in the 43 incorporated places and in the 3 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

Urban definition.—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,¹ and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprised all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course, the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

According to the new definition, the 1950 urban population of Utah included the following components: (1) The 412,518 inhabitants of the 30 incorporated places of 2,500 or more; (2) the 12,796 inhabitants of the 3 unincorporated places of 2,500 or more; and (3) the 24,541 persons living in unincorporated territory and in the 1 incorporated place under 2,500 in the urban fringe of Salt Lake City. Since there were no places urban under special rule in Utah in 1940, the urban population under the old definition com-

¹ Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

UTAH

prised the 412,518 inhabitants of the 30 incorporated places of 2,500 or more. The sum of components 2 and 3 of the new definition—37,337—represents the net gain in the urban population which resulted from the change in definition.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1850 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

Trends of urban and rural population.—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the urban population increased from 105,427 in 1900 to 412,518 in 1950. The increase of 107,025 between 1940 and 1950 was the largest numerical increase in the urban population in the history of the State, whereas the rate of growth—35.0 percent—was the largest since that of the decade 1900 to 1910. The proportion of the population classified as urban rose from 38.1 percent in 1900 to 59.9 percent in 1950.

There was also a steady increase in the rural population of the State from 171,322 in 1900 to 276,344 in 1950. The rural population increased by 31,527, or 12.9 percent, between 1940 and 1950. In each decade of the twentieth century, the rate of growth in the rural population has been below that of the urban population, with the result that the proportion of the population classified as rural has declined from 61.9 percent in 1900 to 40.1 percent in 1950.

Counties.—The 29 counties in Utah ranged in size from Daggett with a population of 364 to Salt Lake with a population of 274,895. Of the 29 counties, 12 gained population between 1940 and 1950, whereas between 1930 and 1940 all but 5 counties had gained population. Of the counties which gained population between 1940 and 1950, only one had no urban population; on the other hand, only three of those which lost population had some urban population. Salt Lake County had the largest numerical growth, whereas the most rapid rate of growth was experienced by Davis County, which had an increase of 95.6 percent.

Minor civil divisions.—To the primary political divisions into which counties are subdivided, the Bureau of the Census applies the general term "minor civil divisions." In Utah the minor civil divisions are called election precincts, except in Daggett County where they are known as election districts. The incorporated cities and towns form subdivisions of the minor civil divisions in which they are located.

Table 6 shows statistics on the population of each county by minor civil divisions for the last three censuses. The population of each incorporated or unincorporated place is shown in *italics* under the population of the district or precinct in which it is located. When an incorporated or unincorporated place lies in two or more districts, the population of the several parts is shown in table 6 under the appropriate precinct or district, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 and 1950 Censuses in the boundaries of areas listed are shown in notes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 1081-1084, and reports of earlier censuses.

Incorporated and unincorporated places.—Utah had 209 places incorporated as cities and towns and 6 unincorporated places. These places ranged in size from Mercur city with a population of 2 to Salt Lake City with a population of 182,121. There were 533,500 persons living in the incorporated places and 18,347 in the unincorporated places. Of the 182 places under 2,500, the 179 incorporated places had a combined population of 120,982 and the 3 unincorporated places, 5,551.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

Urbanized areas.—The only urbanized area in Utah is the Salt Lake City Urbanized Area, which had a population of 227,368. Of the inhabitants in the area, 182,121 were in Salt Lake City, the central city of the area, and 45,247 in its urban fringe. The urban fringe included a population of 22,801 in the 3 cities and 1 town and 22,446 in the unincorporated part (table 9).

Each urbanized area contains at least 1 city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain 2 or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See Salt Lake City Urbanized Area map.)

An urbanized area may also be divided into central city or cities and urban fringe as defined below.

Central cities.—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

Urban fringe.—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportational, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within 1½ miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

¹ According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places urban under special rule are classified as urban places. In Utah there were no places urban under special rule in 1940.

² Includes 24,541 persons in urban territory outside of urban places.³ Includes population of those parts of the Territory of Utah transferred to Nevada in 1864 and 1866 and to Wyoming Territory in 1869.⁴ Includes population of those parts of the Territory of Utah now included in the States of Colorado, Nevada, and Wyoming.

SALT LAKE CITY URBANIZED AREA MAP

The Salt Lake City Urbanized Area, for which statistics are shown in table 9, is depicted in the following map. The shaded areas, in combination, comprise the urbanized area. To assist in locating the exact external boundaries of the area, each boundary feature (street segment, political boundary, or other) has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
